RESEARCH INTEREST

Siyu Yuan（员司雨）is a third-year Ph.D. student at Fudan University in the School of Data Science. Her interested research topics are mostly around cognitive science with generative agents, including (but are not limited to):

- **Cognitive reasoning**, especially on exploring the cognitive reasoning abilities of generative agents, including *analogical reasoning*, *concept understanding*, *role-playing* and *belief exploration* of language agents. The ultimate goal is to enhance the understanding of these agents about themselves and others, thereby enabling them to generate responses that align better with human cognition.
- **Strategic Planning**, especially on equipping generative agents with human-level planning capabilities revolving around *constrained planning*, *tool invocation* and *multitasking planning*.
- **Knowledge Acquisition**, especially on excavating knowledge based on generative agents, including *concept acquisition*, *script generation*, *idiom construction*, *pun generation* and *analogy making*. These aim to construct rich knowledge resources that can be effectively utilized.
