RESEARCH INTEREST

Siyu Yuan is a second-year Ph.D. student at Fudan University in the School of Data Science. Her interested research topics are mostly around cognitive science with generative agents, including (but are not limited to) Main interested research topics include (but not limited to):

- **Cognitive reasoning**, especially on exploring the cognitive reasoning abilities of generative agents, including analogical reasoning, theory of mind, and belief exploration of LLMs. The ultimate goal is to enhance the understanding of these agents about themselves and others, thereby enabling them to generate responses that align better with human cognition.
- **Strategic Planning**, especially on equipping generative agents with human-level planning capabilities revolving around decision-making, case-based reasoning, and other complex planning tasks.
- **Knowledge Acquisition**, especially on excavating knowledge based on generative agents, including concept acquisition, script generation and analogy making. These aim to construct rich knowledge bases that can be effectively utilized.
